

# Air Glide Technology for Patient Chairs Provided Exclusively from DentalEZ Group

DentalEZ® Group is the only company to offer the option of exclusive Air Glide technology on patient chairs, allowing finger-touch movement for ease of cleaning and positioning in the busy dental operatory environment. The option to add the Air Glide technology feature to your favorite DentalEZ patient chair makes for a more efficient and ergonomically-flowing operatory.

The exclusive Air Glide located underneath the chair base allows for free and easy floor positioning. It only takes one click of the switch for the chair bladder to inflate, and the chair glides easily from left to right or front to back with the touch of your hand. With minimal effort, the dentist or staff can easily move their DentalEZ Air Glide operatory chairs for cleaning, handicap access and to easily convert operatory from left to right.

Air Glide technology is just one more benefit provided by DentalEZ that combines ergonomic and advanced features while remaining economical and affordable. The ergonomic design of all DentalEZ patient chairs provides unparalleled features that allow the dental professional to freely maneuver while keeping patients calm and relaxed with comfortable designs.

**Air Glide technology is currently available for both the NuSimplicity™ patient chair as well as the classic J-Chair® and J/V-Generation® patient chairs.\***

DentalEZ leads the way in ergonomic patient chair design. Beginning in 1958 by introducing sit-down dentistry with the J-Chair, every generation of DentalEZ chair design has continued with cutting edge ergonomic solutions for both patients and dentists. Air Glide technology offered by DentalEZ is no exception, pushing the boundaries once more, blending superb ergonomic technology with the flexibility and value that today's dentists demand.

NuSimplicity™

J/V-Generation®

J-Chair®

\*Air Glide technology is a special factory-installed option. Dental professionals must request upon initial chair order, as Air Glide technology feature is not available as a subsequent add-on option.
